REPORT ON ORIENTATION FOR FOOD VENDORS AND SCHOOL FEEDING PROGRAM CONTRACTORS ON NUTRITION

Nutrition we say help us to improve our health as well as to prevent us from diseases.

Everybody needs nutrient day in and day out to help in maintaining health and build the body to reduce the risk of chronic diseases.

On the 17th February, 2022, a team of Environmental Health officers in Bosomtwe District Assembly went to orient school feeding contractors on nutrition at Aputuogya Roman Church.

One woman called Akua Badu a participant, prayed for commencement of the program.

Madam Lydia Asare, an environmental health officer gave a brief introduction about nutrition and how important it is.

She advised that taken in food that contains the right proportion of nutrients will helped the children to grow well and also increase their energy level as well as improve their abilities to cope with stress and increase concentration and performance of the student in various schools. She noted that feeding the children with nutritious foods will help in building their body stature and also replace worn out tissues. She therefore let them understand that nutrient help in body growth that food without nutrient may affect the function of the body organs.

On her part, Ms. Naa Ayorkor also advised the participant that taking a balance diet will improve their health and prevent diseases.

She said taken in the right nutrition helps in reduction of high blood pressure, improved the ability of the children to recover from illness or injury

She concluded the orientation by saying that lack of nutrient in our food or diet will put the school children at risk such as kwashiorkor, stunted growth, marasmus and others. Poor brain development, weak immune system will decrease one's ability to fight infectious diseases which may lead to death. She said that they should always cook food that contain the right nutrient to help boost their immune system.

RECOMMENDATION

1. The contractor should always provide balanced diet to the student.
2. Food should be cooked under hygienic environment.
3. They should get screened annually.

2022 REPORT ON FOOD VENDORS AND HANDLERS ORIENTATION

The Orientation for Food Vendors in the District was held on Thursday, January 27th 2022, at 10:15 at Aputuogya.

AREAS OF INTERESTS: FOOD SAFETY AND FOOD HYGIENE

The orientation commenced with a short open prayer offered by Mad. Priscilla Addai Poku, who is a food seller at *Atobiase R/C* primary and KG. Mr. Paul Oduro, Chief Environmental Health Officer, began by thanking all the vendors for attending the orientation and admonished them that it would be of great significance to them. He then went on to explain to the vendors what food safety actually means.

The Environmental Health Officer made them understand that food safety is not all about keeping oneself clean like bathing, washing clothes, and selling foods in nice containers, but rather it goes beyond the few activities that have been aforementioned. He further added that food safety is used as a scientific method for describing the handling, preparation, and storage of food in a way that prevents food borne illness; the occurrence of two or more cases of a similar illness resulting from common food.

The Environmental Health Officer focused on the storage of food by saying that food must be stored in a good and hygienic condition so as to prevent rodent scrapes, smears, and droppings from getting into contact with it, thereby preventing its contamination. He also stated that cooked food must be separated from raw food to prevent cross-contamination. The vendors and handlers were told not to store cooked food in an open space so as to prevent its direct contact with the sun. And that it must be covered with a well-fitting lid to prevent flies and bacteria from getting into contact with it. Moreover, food must always be served hot and not cold to prevent diarrhoea and cholera.

The Environmental Health Officer went on to emphasize the importance of preventive measures for food safety and hygiene, saying:

1. Food vendors must always cut off their finger nails to prevent germs from getting into contact with food.
2. They must also cover their heads and wear aprons to prevent hair from getting into food and food from splinting into their dresses.
3. Before and after using the restroom and changing diapers, wash your hands with soap and water under running water.
4. To avoid food poisoning, wash vegetables such as spring onions, cabbage, cucumber, carrot, lettuce, and others under running water with vinegar or salty water.
5. Lastly, before one can prepare food and sell it to the general public, the person must be medically screened well before he or she sells it to the public.

One of the food vendors asked a question: on why they have to be screened every year while they already know their status?

Faustina, one of the environmental health officers present, thanked the food vendors and answered the question by saying that so long as we live, move, eat, and shake hands with different people, we are likely to spread the disease; and also, there are new vendors who enter into the cooking business every year whilst others leave, necessitating the necessity to be screened every year.

Mabel gave the vote of thanks and also said the closing prayer. The orientation ended at 12:00 p.m.

CHARLES SASAH TETTEH
